IN THE CLAIMS:

1. (currently amended) In the transcoding of video streams, a method for adaptive rate control, the method comprising:

accepting frames of an input MPEG encoded video stream;

decoding the video stream;

~~determining video stream complexity;~~

calculating an average input video stream quantization factor (Qi) for each frame

accepting a target bit rate ratio (r) for transcoding the video stream that is equal to the ratio of the target output video stream number of bits per frame (No), to the input video stream number of bits per frame (Ni) as follows:

$r = No/Ni$;

for each frame, calculating an output video stream quantization parameter (Qo) ~~responsive to determined video stream complexity~~ as follows:

$Qo = Qi/r$; and,

encoding the output video stream into a protocol using Qo.

2-3. canceled

4. (currently amended) The method of claim [[3]] 1 wherein accepting frames of an input MPEG encoded video stream includes accepting frames with a plurality of slices; and,

wherein calculating Qi for each frame includes calculating the quantization parameter by averaging the Qi values for each slice in a frame.

5. (currently amended) The method of claim [[3]] 1 wherein accepting an input MPEG encoded video stream includes accepting intra (I), predictive (P), and bi-directionally predictive (B) picture types; and,

wherein determining the video stream complexity of the input MPEG encoded video stream includes:

independently determining the complexities of the I, P, and B picture types in the input video stream; and,

independently determining the complexities of the I, P, and B picture types in the output video stream.

6. (currently amended) The method of claim [[3]] 1 wherein determining the video stream complexity includes determining a complexity ratio: of an accumulated complexity in the output video stream, to an accumulated complexity in the input video stream.

7. (original) The method of claim 6 wherein the accumulated complexity in the input video stream is the product of Qi times Ni, accumulated over a plurality of frames; and,

wherein the accumulated complexity of the output video stream is the product of Qo times No, accumulated over the plurality of frames.

8. (original) The method of claim 7 wherein determining the video stream complexity includes expressing the complexity ratio (α_k) as follows:

$$\alpha_k = \frac{\sum_{j=0}^{k-1}(Q_{o,j} \cdot N_{o,j})}{\sum_{j=0}^{k-1}(Q_{i,j} \cdot N_{i,j})} ;$$

wherein j equals the plurality of frames; and,

wherein k is the current frame.

9.   (original)   The method of claim 8 wherein calculating Qo includes calculating Qo, for each frame, as follows:

$Qo = (\alpha_k \cdot Qi)/r$.

10.   (original)   The method of claim 9 further comprising:

determining an actual bit rate ratio (r') for transcoding the video stream as follows:

$r' = No/Ni$;

where No and Ni are accumulated over a plurality of frames;

determining a feedback correction factor (B_k) responsive to the value of r'; and,

wherein calculating Qo includes modifying the value of Qo in response to B_k.

11.   (original)   The method of claim 10 wherein determining B_k includes determining B_k, for each frame, as follows:

$B_k = r'/r$.

12.   (original)   The method of claim 11 wherein calculating Qo includes calculating Qo, for each frame, as follows:

$Qo = (\alpha_k \cdot Qi)/r \cdot B_k;$

wherein the value of α_k is updated after every frame.

13.   (currently amended)   The method of claim 1 ~~further comprising:~~

~~accepting a target bit rate ratio (r) for transcoding the video stream equal to the ratio of the target output video stream number of bits per frame (No), to the input video stream number of bits per frame (Ni) as follows:~~

~~r = No/Ni; and,~~

wherein encoding the output video stream into a protocol using Qo includes encoding the output video stream into an MPEG-4 video stream using r.

14.   canceled

15.   (currently amended)   In the transcoding of video streams, a system for adaptive rate control, the system comprising:

a decoder having an interface to accept frames of an input MPEG encoded video stream, an interface to supply a decoded video stream, and an interface to supply decoding process information <u>including an average input video stream quantization factor (Qi) for each frame</u>;

a transcoder control unit having an interface to accept the decoding process information <u>and an interface to accept a target bit rate ratio (r) for transcoding the video stream that is equal to the ratio of the target output video stream number of bits per frame (*No*), to the input video stream number of bits per frame (*Ni*) as follows:</u>

<u>r = *No/Ni*;</u>

[[,]] the transcoder control unit determining video stream complexity and supplying an output video stream quantization parameter (*Qo*) <u>initially calculated as follows:</u>

<u>*Qo = Qi/r*</u>

~~responsive to determined video stream complexity for each frame of the decoded video stream~~; and,

an encoder having an interface to accept the decoded video, an interface to accept *Qo*, and an interface to supply an output video stream encoded into a protocol using *Qo*.

16-17. canceled

18.　(currently amended)　The system of claim [[17]] <u>15</u> wherein the decoder accepts frames of an input MPEG encoded video stream with a plurality of slices; and,

wherein the decoder calculates *Qi* for each frame by averaging the *Qi* values for each slice in a frame.

19.　(currently amended)　The system of claim [[17]] <u>15</u> wherein the decoder accepts an input MPEG encoded video stream

including intra (I), predictive (P), and bi-directionally predictive (B) picture types; and,

wherein the transcoder control unit independently determines the complexities of the I, P, and B picture types in the input video stream, and independently determines the complexities of the I, P, and B picture types in the output video stream.

20.   (currently amended)   The system of claim [[17]] 15 wherein the transcoder control unit calculates Qo in response to a complexity ratio of: an accumulated complexity in the output video stream, to an accumulated complexity in the input video stream.

21.   (original)   The system of claim 20 wherein the transcoder control unit calculates an accumulated complexity in the input video stream as the product of Qi times Ni, accumulated over a plurality of frames, and calculates the accumulated complexity of the output video stream as the product of Qo times No, accumulated over the plurality of frames.

22.   (original)   The system of claim 21 wherein the transcoder control unit calculates the complexity ratio (α_k) as follows:

$$\alpha_k = \frac{\sum_{j=0}^{k-1}(Q_{o,j} \cdot N_{o,j})}{\sum_{j=0}^{k-1}(Q_{i,j} \cdot N_{i,j})};$$

wherein j equals the plurality of frames; and,

wherein k is the current frame.

23.   (original)   The system of claim 22 wherein the transcoder control unit calculates Qo, for each frame, as follows:

$Qo = (\alpha_k \cdot Qi)/r$.

24.   (original)   The system of claim 23 wherein the transcoder control unit determines an actual bit rate ratio (r') for transcoding the video stream as follows:

$r' = No/Ni$;

where No and Ni are accumulated over a plurality of frames; and,

wherein the transcoder control unit determines a feedback correction factor (B_k) responsive to the value of r', and modifies the value of Qo in response to B_k.

25.   (original)   The system of claim 24 wherein the transcoder control unit determines B_k, for each frame, as follows:

$B_k = r'/r$.

26.   (original)   The system of claim 25 wherein the transcoder control unit calculates Qo, for each frame, as follows:

$Qo = (\alpha_k \cdot Qi)/r \cdot B_k$;

wherein the value of α_k is updated after every frame.

27.   (currently amended)   The system of claim 15 ~~wherein the transcoder control unit has an interface to accept a target bit rate ratio (r) for transcoding the video stream equal to the ratio of the target output video stream number of bits per frame (No), to the input video stream number of bits per frame (Ni) as follows:~~

~~r = No/Ni;~~

~~wherein the transcoder control unit calculates Qo responsive to the value of r; and,~~

wherein the encoder encodes the output video stream into an MPEG-4 protocol.
